DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-34 and 59-77, drawn to a bench style seating assembly, classified in class 297, subclass 331.
- II. Claims 35-58, drawn to a method of assembling a bench style seating assembly, classified in class 29, subclass 428+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process, such as:

- determining a desired length of the seating assembly;
- selecting a block of material;
- extruding from the block of material a base and a substantially horizontal beam that is integrally supported on the base;
- fixing at least one seat back assembly to the beam;

Art Unit: 3636

fixing a plurality of seat connector mechanisms to the beam;

selecting a width of each of a plurality of seat bottom assemblies so as to cause the seating assembly to have the desired length, a selected width of at least one of the plurality of seat bottom assemblies being different than a selected width of at least one other of the plurality of seat bottom assemblies; and

attaching the plurality of seat bottom assemblies pivotably to the beam by the plurality of seat connection mechanisms.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and at least the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention of Group I: Subgroup IA, Figures 1-5; Subgroup IB, Figure 5; Subgroup IC, Figure 7; and Subgroup ID, Figure 8.

Art Unit: 3636

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 3636

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
